Further, your right to redeem may be temporarily suspended under certain circumstances.</p>	
Product-Specific Risks	
<p>You are exposed to Derivatives Risks. The Underlying Fund will use financial derivative instruments for investment purposes and for the purpose of meeting its investment objective. The Underlying Fund's investment in financial derivative instruments may involve additional risks, for example, counterparty default risk or insolvency risk, risk involved with effective management of derivative strategies, risk of mispricing or improper valuation of derivatives, risk of embedded leverage through investment in a derivative that is itself leveraged, risk of higher volatility, risk of illiquidity in the market for certain derivative strategies and risk of loss greater than the amount invested in the derivative, and may expose the fund to significant losses.</p> <p>You are exposed to Dynamic Asset Allocation Risk. The Underlying Fund will allocate to different asset classes, which may have a large impact on returns if one of these asset classes significantly underperforms the others. In addition, as both the direct investments and derivative positions may be periodically rebalanced, there will be transaction costs which may be, over time, significant.</p> <p>You are exposed to Equity Securities Risk. The value of underlying equity investments of the Underlying Fund may fluctuate in response to the activities and results of individual companies, or because of general market and economic conditions and changes in currency exchange rates.</p> <p>You are exposed to Fixed Income Securities Risk. The NAV of an Underlying Fund invested in fixed-income securities will change in response to fluctuations in interest rates and currency exchange rates, as well as changes in credit quality of the issuer.</p>
